

Amber Wilson Résumé

My name is Amber and I'm a front end engineer with a keen interest in performance, accessibility, and security. I have extensive experience in agile, version control, testing, CI/CD, and error handling. Additionally, I've worked on internal tools (TypeScript), onboarded engineers, run A/B tests, managed headless CMS requests, written middlewares for backend endpoints, overseen API creation, improved SEO, and more. In my spare time I love writing, reading, taking photos, long walks outside, meeting new people, and seeing new places!
